1. A section

This document is produced by `mcanouil-typst` as the site is published, so the layout, the typography, and the colours are the extension rather than a description of it.

1. A section

2. The components

The shortcodes and the divs are rendered natively by each format rather than passed through as HTML.

Progress

— A divider —

A panel

Panels carry a title, an optional icon, and one of ten colour themes.

3. A table

Option	Effect
<code>style</code>	Chooses between the professional and academic layouts.
<code>brand-mode</code>	Chooses between the light and dark palettes.

The same brand drives the HTML and RevealJS formats, so a report, a page, and a deck look like one another.
