

Prism in Typst

The same source, resolved for another format.

This page is part of the documentation site and is rendered to Typst, so every prefix on it resolves against that format rather than against HTML.

This paragraph asks for one colour under the site format and blue under Typst. In this PDF it is blue.

This one names no Typst value, so the default applies and it is grey. On the HTML pages the exact match wins instead.

This one targets the slide formats only, so nothing applies here and the text is ordinary.

The examples page shows the same three paragraphs resolved for HTML.
